## Derivatives from a table

## 2015 BC3

1. Johanna jogs along a straight path. For $0 \leq t \leq 40$. Johanna's velocity is given by a differentiable function $v$. Selected values of $v(t)$, where $t$ is measured in minutes and $\mathrm{v}(\mathrm{t})$ is measured in meters per minute, are given in the table.

| $t$ <br> (minutes) | 0 | 12 | 20 | 24 | 40 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $v(t)$ | 0 | 200 | 240 | -220 | 150 |
| (meters per minute) |  |  |  |  |  |

a) Use the data in the table to estimate the value of $v^{\prime}(16)$.

## 2014 BC 4

| t <br> (minutes) | 0 | 2 | 5 | 8 | 12 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathrm{v}_{\mathrm{A}}(\mathrm{t})$ <br> $($ meters $/ \mathrm{min})$ | 0 | 100 | 40 | -120 | -150 |

4. Train A runs back and forth on an east-west section of railroad track. Train A's velocity, measured in meters per minute, is given by a differentiable function $v_{A}(t)$, where time $t$ is measured in minutes. Selected values for $v_{A}(t)$ are given in the table above.
a) Find the average acceleration of train A over the interval $2 \leq t \leq 8$.

Hot water is dripping through a coffeemaker, filling a large cup with coffee. The amount of coffee in the cup at time $\mathrm{t}, 0 \leq t \leq 6$, is given by a differentiable function C , where t is measured in minutes. Selected values of $C(t)$, measured in ounces, are given in the table.

| t (minutes) | 0 | 1 | 2 | 3 | 4 | 5 | 6 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathrm{C}(\mathrm{t})$ <br> ounces | 0 | 5.3 | 8.8 | 11.2 | 12.8 | 13.8 | 14.5 |

a) Use the data in the table to approximate $C^{\prime}(3.5)$. Show the computations that lead to your answer, and indicate units of measure.

2011 \#2

| t (minutes) | 0 | 2 | 5 | 9 | 10 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathrm{H}(\mathrm{t})$ degrees <br> C | 66 | 60 | 52 | 44 | 43 |

As a pot of tea cools, the temperature of the tea is modeled by a differentiable function H for $0 \leq t \leq 1 \mathrm{Q}$ where time t is measured in minutes and temperature $\mathrm{H}(\mathrm{t})$ is measured in degrees Celsius. Values of $\mathrm{H}(\mathrm{t})$ at selected values of time t are shown in the table above

Use the data in the table to approximate the rate at which the temperature of the tea is changing at time $t=3.5$. Show the computations that lead to your answer.

## $\underline{2012 \text { \#4 }}$

The function f is twice differentiable for $\mathrm{x}>0$ with $\mathrm{f}(1)=15$ and $f^{\prime \prime}(1)=20$. Values $f^{\prime}$, the derivative of f , are given for selected values of x in the table.

| x | 1 | 1.1 | 1.2 | 1.3 | 1.4 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $f^{\prime}(x)$ | 8 | 10 | 12 | 13 | 14.5 |

a) Write an equation for the line tangent to the graph of f at $\mathrm{x}=1$. Use this line to approximate $f(1.4)$.

| t (minutes) | 0 | 4 | 9 | 15 | 20 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathrm{W}(\mathrm{t})$ <br> degrees F | 55.0 | 57.1 | 61.8 | 67.9 | 71.0 |

The temperature of water in a tub at time $t$ is modeled by a strictly increasing, twice differentiable function, $W$, where $W(t)$ is measured in degrees Fahrenheit and $t$ is measured in minutes. At time $t=0$, the temperature of the water is $55^{\circ} \mathrm{F}$. The water is heated for 30 minutes, beginning at time $t=0$. Values of $W(t)$ at selected times $t$ for the first 20 minutes are given in the table above.
a) Use the data in the table to estimate $W^{\prime}(12)$. Show the computations that lead to your answer. Using correct units, interpret the meaning of your answer in the context of this problem.

2010 \#2
A zoo sponsored a one-day contest to name a new baby elephant. Zoo visitors deposited entries in a special box between noon ( $t=0$ ) and 8 P.M. ( $t=8$ ). The number of entries in the box $t$ hours after noon is modeled by a differentiable function E for $0 \leq t \leq 8$. Values of $\mathrm{E}(\mathrm{T})$, in hundreds of entries, at various times t are shown in the table.

| t (hours) | 0 | 2 | 5 | 7 | 8 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathrm{E}(\mathrm{t})$ <br> (hundreds <br> of entries) | 0 | 4 | 13 | 21 | 23 |

b) Use the data in the table to approximate the rate in hundreds of entries per hour, at which entries were being deposited at time $t=6$. Show the computations that lead to your answer.

2009 \#5
Let f be a function that is twice differentiable for all real numbers. The table gives values of f for selected points in the closed interval $2 \leq x \leq 13$.

| $x$ | 2 | 3 | 5 | 8 | 13 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $f(x)$ | 1 | 4 | -2 | 3 | 6 |

Estimate $f^{\prime}(4)$. Show the work that leads to your answer.
