Find the linearization of the function.
Find $\mathrm{L}(\mathrm{a}+.1)$ and $\mathrm{f}(\mathrm{a}+.1)$
Using concavity, determine if the Tangent Line at a is an overestimate or an underestimate. Justify your answer.

1. $f(x)=x^{2}+3 \mathrm{x}+4 \mathrm{a}=-2$
2. $f(x)=x^{3}+1 \quad \mathrm{a}=1$
3. $f(x)=\sqrt{x-1} \quad \mathrm{a}=5$
4. $f(x)=x+\frac{4}{x} \quad \mathrm{a}=4$
$x$
5. $f(x)=\frac{1}{x+1} \quad \mathrm{a}=0$

Find the linearization of the function.
Find $L(a+.1)$ and $f(a+.1)$
Using concavity, determine if the Tangent Line at a is an overestimate or an underestimate. Justify your answer.

$$
\begin{aligned}
& \text { 1. } f(x)=x^{2}-5 \mathrm{x}+1 \quad \mathrm{a}=3 \\
& \text { 2. } f(x)=\sqrt{1+x} \quad \mathrm{a}=0 \\
& \text { 3. } f(x)=x^{3}-2 \mathrm{x}+3 \quad \mathrm{a}=2
\end{aligned}
$$
