

Differentiable  $\rightarrow$  Instantaneous = Avg Rate

Hot water is dripping through a coffeemaker, filling a large cup with coffee. The amount of coffee in the cup at time  $t$ ,  $0 \leq t \leq 6$ , is given by a differentiable function  $C$ , where  $t$  is measured in minutes. Selected values of  $C(t)$ , measured in ounces, are given in the table.

$t$ (minute s)	0	1	2	3	4	5	6
$C(t)$ ounces	0	5.3	8.8	11.2	12.8	13.8	14.2

Is there a time  $t$ ,  $3 \leq t \leq 6$ , at which  $C'(t) = 1$ . Justify your answer.

$(3, 11.2)$   $(6, 14.2)$

Instantaneous Rate

$$\frac{14.2 - 11.2}{6 - 3} = 1$$

Avg Rate = Instantaneous

yes. Because  $C(t)$  is differentiable and the instantaneous rate of change = the avg. rate of change from  $3 \leq t \leq 6$

Let  $g$  be a continuous function with  $g(2) = 5$ . The graph of the piecewise-linear function

$g'$ , the derivative of  $g$ , is shown for  $-3 \leq x \leq 7$ .

$(-3, -4)$   $(1, 1)$   
Avg Rate =  $\frac{1 - (-4)}{1 - (-3)} = \frac{5}{4}$

Find the average rate of change of  $g(x)$ , on the interval  $-3 \leq x \leq 1$ . Does the Mean Value Theorem applied on the interval  $-3 \leq x \leq 1$  guarantee a value of  $c$ , for  $-3 < c < 1$ , such that  $g'(c)$  is equal to this average rate of change? Why or why not?

instantaneous

No. Because  $g'(x)$  is not differentiable at  $x = -1$

2005 AB5

A car is traveling on a straight road. For  $8 \leq t \leq 24$  seconds, the car's velocity  $v(t)$ , in meters per second, is modeled by the piecewise-linear function defined by the graph

$$\text{Avg Rate} = \frac{20-0}{16-0} = \frac{20}{16}$$

No, because  $v(t)$  is not differentiable at  $t=4$ .

Find the average rate of change of  $v$  over the interval  $0 \leq t \leq 16$ . Does the Mean Value guarantee a value of  $c$ , for  $0 < c < 16$ , such that  $v'(t)$  is equal to this average rate of change? Why or why not?

2004 BCB3

A test plane flies in a straight line with positive velocity  $v(t)$ , in miles per minute at time  $t$  minutes, where  $v$  is a differentiable function of  $t$ . Selected values of  $v(t)$  are shown.

$t(\text{min})$	0	5	10	15	20	25	30	35	40
$v(t)$ (mpm)	7	9.2	9.5	9.2	4.5	2.4	4.5	4.9	7.3

Based on the values in the table, what is the smallest number of instances at which the acceleration of the plane could equal zero on the open interval  $0 < t < 40$ ? Justify your answer

Two. Since  $v(t)$  is differentiable  
the average rate of change = 0 when  
the values of  $v(t)$  are the same. This  
happens between  $5 \leq t \leq 15$  and  $20 \leq t \leq 30$ .

2009 BC3

A continuous function  $f$  is defined on the closed interval  $-4 \leq x \leq 6$ . The graph of  $f$  consists of a line segment and a curve that is tangent to the  $x$ -axis at  $x = 3$ , as shown in the figure above. On the interval  $0 < x < 6$ , the function  $f$  is twice differentiable, with  $f'(x) > 0$ .

$(a, ) (6, 1)$   
 $(0, 2) (6, 1)$

$c$  is just  
 an  $x$ -value.

Is there a value  $a$ , for which the Mean Value Theorem, applied to the interval  $[a, 6]$ , guarantees a value  $c$ ,  $a < c < 6$ , at which  $f'(c) = \frac{-1}{6}$ ? Justify your answer.

yes at  $a = 0$   
 since  $f$  is differentiable from  $0 \leq t \leq 6$   
 and the avg rate of change = instantaneous rate of change

2011 BCB5

Ben rides a unicycle back and forth along a straight east-west track. The twice-differentiable function  $B$  models Ben's position of the track, measured in meters from the western end of the track, at time  $t$ , measured in seconds from the start of the ride. The table gives values of  $B(t)$  and Ben's velocity,  $v(t)$ , measured in meters per second, at selected times  $t$ .

$t$ (seconds)	0	15	40	60
$B(t)$ (meters)	100	136	9	46
$V(t)$ meters per second	2	2.3	2.5	4.6

For  $15 \leq t \leq 60$ , must there be a time  $t$  when Ben's velocity is  $-2$  meters per second? Justify your answer.

$$\text{Avg Rate} = \frac{136 - 46}{15 - 60} \quad -2 = \text{instantaneous}$$

92 Let  $f$  be the function defined by  $f(x) = x + \ln(x)$ . What is the value of  $c$  for

**CALCULUS: Graphical, Numerical, Algebraic by Finney, Demana, Watts and Kennedy**  
**Chapter 8: Applications of Derivatives 8.2: L'Hopitals Rule pg. 444-452**

What you'll Learn About:  
 How to use derivatives to find limits in an indeterminate form

Why L'Hopitals Works

Sketch the graph of two curves with the following characteristic  $f(2) = g(2) = 0$ .

a) Write the tangent line for  $f(x)$

$$(2, 0) \quad f'(x) \\ y = 0 + f'(x)(x-2)$$

b) Write the tangent line for  $g(x)$

$$(2, 0) \quad g'(x) \\ y = 0 + g'(x)(x-2)$$

$$c) \lim_{x \rightarrow 2} \frac{f(x)}{g(x)} = \frac{f(2)}{g(2)} = \frac{0}{0}$$

$$\lim_{x \rightarrow 2} \frac{f'(x)(x-2)}{g'(x)(x-2)} \rightarrow \lim_{x \rightarrow 2} \frac{f'(x)}{g'(x)}$$

$$d) \lim_{x \rightarrow 0} \frac{2x^2}{x^2} = \frac{0}{0}$$

$$\lim_{x \rightarrow 0} \frac{4x}{2x} = \frac{0}{0}$$

$$\lim_{x \rightarrow 0} \frac{4}{2} = 2$$

$$2) \lim_{x \rightarrow 0} \frac{\sin(5x)}{x} = \frac{0}{0}$$

$$\lim_{x \rightarrow 0} \frac{\cos(5x) \cdot 5}{1} = 5$$

$$4) \lim_{x \rightarrow 1} \frac{\sqrt[3]{x}-1}{x-1} = \frac{0}{0}$$

$$\lim_{x \rightarrow 1} \frac{x^{1/3}-1}{x-1}$$

$$\lim_{x \rightarrow 1} \frac{\frac{1}{3}x^{-2/3}}{1} = \frac{1}{3}$$

$$A) \lim_{x \rightarrow \infty} \frac{x^3-1}{4x^3-x-3} = \frac{1}{4}$$

$$49) \lim_{x \rightarrow 1} \frac{x^3-1}{4x^3-x-3} = \frac{0}{0}$$

$$\lim_{x \rightarrow 1} \frac{3x^2}{12x^2-1} = \frac{3}{11}$$

$$27) \lim_{x \rightarrow \infty} \frac{\ln(x^5)}{x} = \frac{\infty}{\infty}$$

$$\lim_{x \rightarrow \infty} \frac{1}{x^5} \cdot 5x^4 = \frac{5x^4}{x^5} = \frac{5}{x}$$

Horizontal Asym: 0

Indeterminate Form

$$35) \lim_{x \rightarrow \infty} \frac{\log_2(x)}{\log_3(x+3)} = \frac{\infty}{\infty}$$

$$33) \lim_{x \rightarrow 0} \frac{\sin(x^2)}{x} = \frac{0}{0}$$

$$\lim_{x \rightarrow 0} \frac{\cos(x^2) \cdot 2x}{1} = \frac{0}{1} = 0$$

L.R.

Rewrite

LR

$$\lim_{x \rightarrow \infty} \frac{\left(\frac{1}{x \ln 2}\right)}{\left(\frac{1}{(x+3) \ln 3}\right)}$$

$$\lim_{x \rightarrow \infty} \frac{(x+3) \ln 3}{x \ln 2} = \frac{\ln 3}{\ln 2}$$

$$\lim_{x \rightarrow \infty} \frac{\ln 3}{\ln 2}$$
