1. Determine the shape of each Histogram

Approximately Normal
Skewed Right Skewed Left
Neither Normal or Skewed
2. Estimate the Mean and Median

Approximately Normal: Mean and Median almost the same Skewed Left: Median > Mean (Median greater than Mean)

Mean on the left of the median
Skewed Right: Median < Mean (Median Less than the Mean)
Mean on the right of the median
$\left.\begin{array}{|l|l|l|}\hline \text { Basis } & \begin{array}{l}\text { Left-Skewed } \\ \text { Histogram } \\ \text { 1. Skewness } \\ \text { Skewed to the } \\ \text { left }\end{array} & \begin{array}{l}\text { Right-Skewed } \\ \text { Histogram }\end{array} \\ \hline \text { right }\end{array} \left\lvert\, \begin{array}{l}\text { 2. Position of } \\ \text { the Peak }\end{array} \quad \begin{array}{l}\text { The peak of the } \\ \text { graph is on the } \\ \text { right of the } \\ \text { median }\end{array} \quad \begin{array}{l}\text { The peak of the } \\ \text { graph is on the } \\ \text { left of the } \\ \text { median }\end{array}\right.\right\}$
