## Modeling Review

## Name

1. A rental car company charges $\$ 30$ plus $\$ .20$ per mile to rent a car. The cost, $\mathbf{C}$ (in dollars) would depend on the number of miles driven, $\mathbf{m}$, according to the rule $\mathbf{C}=\mathbf{3 0}+\mathbf{. 2 0 m}$
a. Use the function rule to complete this table of sample ( $n, C$ ) values:

| \#of miles (m) | 0 | 1 | 2 | 3 | 4 | 5 | 10 | 20 | 50 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $\operatorname{Cost}(\mathrm{C})$ |  |  |  |  |  |  |  |  |  |

C. i) How much will the car rental cost if they don't drive the car at all?
ii) How can this information be seen in the rule $\mathbf{C}=\mathbf{3 0}+\mathbf{. 2 0 m}$
iii) How can this information be seen In the table of sample $(m, C)$ values?
iv) How can this information be seen In the graph?
d. i) How much does each mile driven cost?
ii) How can this information be seen in the rule $\mathbf{C}=\mathbf{3 0}+\mathbf{. 2 0 m}$
iii) How can this information be seen in the table?
iv) How can this information be seen in the In the graph?
e. Write a recursive rule for the situation described above.
2. The graph below shows pay plans offered by 3 banks to employees who collect credit card applications.

Atlantic Bank: A $=50+2 \mathrm{n} \quad$ Boston Bank: $\quad B=40+5 n \quad$ Consumer Bank: $C=50+3 n$

Match each function rule with its graph by placing the letter A, B, or C next to the correct graph.

Explain what the numbers in the rule for Consumer Bank tell you about the relationship between daily pay and number of credit card applications collected.
